Job Description: Android/Java Developer

Job purpose

We are looking for a Android Java developer to join our team. Mid and senior levels of developers with anywhere from 3+ years' experience are welcome to apply. We primarily utilize Android and Java technologies, languages and processes.

At the moment we are seeking an experienced Object Oriented Programmer for developing mainly with Android and Java. This role will take an existing codebase and bring it in line with our revised design specifications. Candidates must have a strong understanding of UI, reflection techniques, workflow engines, client-server techniques, device side functions and industry standards.

The position requires constant communication with colleagues, so English is a must.

Main responsibilities

- Develop and refine existing Android software code to be in line with new designs.
- Complete development by coordinating requirements, schedules, and activities; contributing to team meetings; troubleshooting development and production problems across multiple environments and operating platforms.
- Take ownership of bringing the GUI to market and extending features of the existing product across multiple platforms.
- Work independently within a group of developers to drive product development.
- Communicate and coordinate effectively with people at all levels, within and outside the company, to ensure optimal progress towards our goals.

Required skills

- Demonstrate solid working knowledge of Android and Java.
- Have a deep understanding of Android and Java development and environments.
- Able to think "outside the box" in implementing solutions that operate across a variety of platforms (Smartphones, Tablets, PCs, Etc.).
- Additionally IOS and UNIX experience would be a plus.
- Have a solid command of written and spoken English

You should

- Have a passion for android development and technology in general
- Welcome technical challenges of high complexity
- Be capable of creating and executing technical direction and tasks allocated to you
- Be capable of support users by developing base documentation and assistance tools.
- Be capable of defining software objectives by analysing user requirements whilst envisioning system features and functionality.
- Have excellent interpersonal skills and a sense of humour.

Conditions, Salary and Benefits

- Attractive compensation based upon experience and performance
- Work in an office that understands and values developers. No cubicles, no unnecessary meetings, the freedom to produce results, excellent hardware
- Responsibility for your output (and the corresponding accountability)
- Other great teammates you will learn from (and vice versa)
- After a suitable trial period enjoy profit sharing, insurance and other benefits
