Job Description: Java Web Developer

Job purpose

We are looking for a Java programmer with an in depth understanding of how the World Wide Web works. The position will be to take the existing Java code base and refine it in line with the new designs for the ONE-VIOS ecosystem. As this component will be the core interface to the existing Web technologies and integral to the security of the ONE-VIOS framework.

This is not JavaScript programming, so you must be proficient in Java and all web development and operations. The position will create a brand new way of managing the existing web content and deliver a new methodology for creating a "Web Presence". As this component is core to the framework, the role is an important and challenging one.

At the moment we are seeking an Object Oriented Programmer for developing mainly with Java, XML and HTML. But this is no website development job, so you must also have real programming skills in Java language as well. Candidate must have a strong understanding of UI, cross-browser compatibility, general web functions and standards.

The position requires constant communication with colleagues, so English is a must.

Main responsibilities

- Develop web-based software to integrate with our growing set of software solutions
- Complete development by coordinating requirements, schedules, and activities; contributing to team meetings; troubleshooting development and production problems across multiple environments and operating platforms.
- Take ownership of bringing new products to market and extending features of existing product(s).
- Work independently within a group of developers to drive product development.
- Communicate and coordinate effectively with people at all levels, within and outside the company, to ensure optimal progress towards our goals.

Required skills

- Demonstrate solid working knowledge of object oriented programming language (Java, C++, etc.).
- Have a deep understanding of web development and environments.
- Possess foundational knowledge of the stuff that makes the web tick: JavaScript, HTML, CSS, and the relational data model
- Have a solid command of written and spoken English

You should

- Have a passion for web development and technology in general
- Welcome technical challenges of the highest complexity
- Be capable of creating and executing technical direction and tasks allocated to you
- Be capable of support users by developing documentation and assistance tools.
- Be capable of defining software objectives by analysing user requirements; envisioning system features and functionality.
- Have excellent interpersonal skills and a sense of humour.

Salary and earnings

- Attractive compensation based upon experience and performance
- Work in an office that understands and values developers. No cubicles, no unnecessary meetings, the freedom to produce results, excellent hardware
- Responsibility for your output (and the corresponding accountability)
- Other great teammates you will learn from (and vice versa)
- After a suitable trial period enjoy profit sharing, insurance and other benefits
